

Java Networking

- Networking is used to communicate between applications running on different JREs.
- Socket Programming is used for Networking.
- Note→

1. `java.net*` package is used to implement networking in java.

2. `Socket` and `serverSocket` classes are used for connection oriented socket programming.

3. The client must know the following instructions:

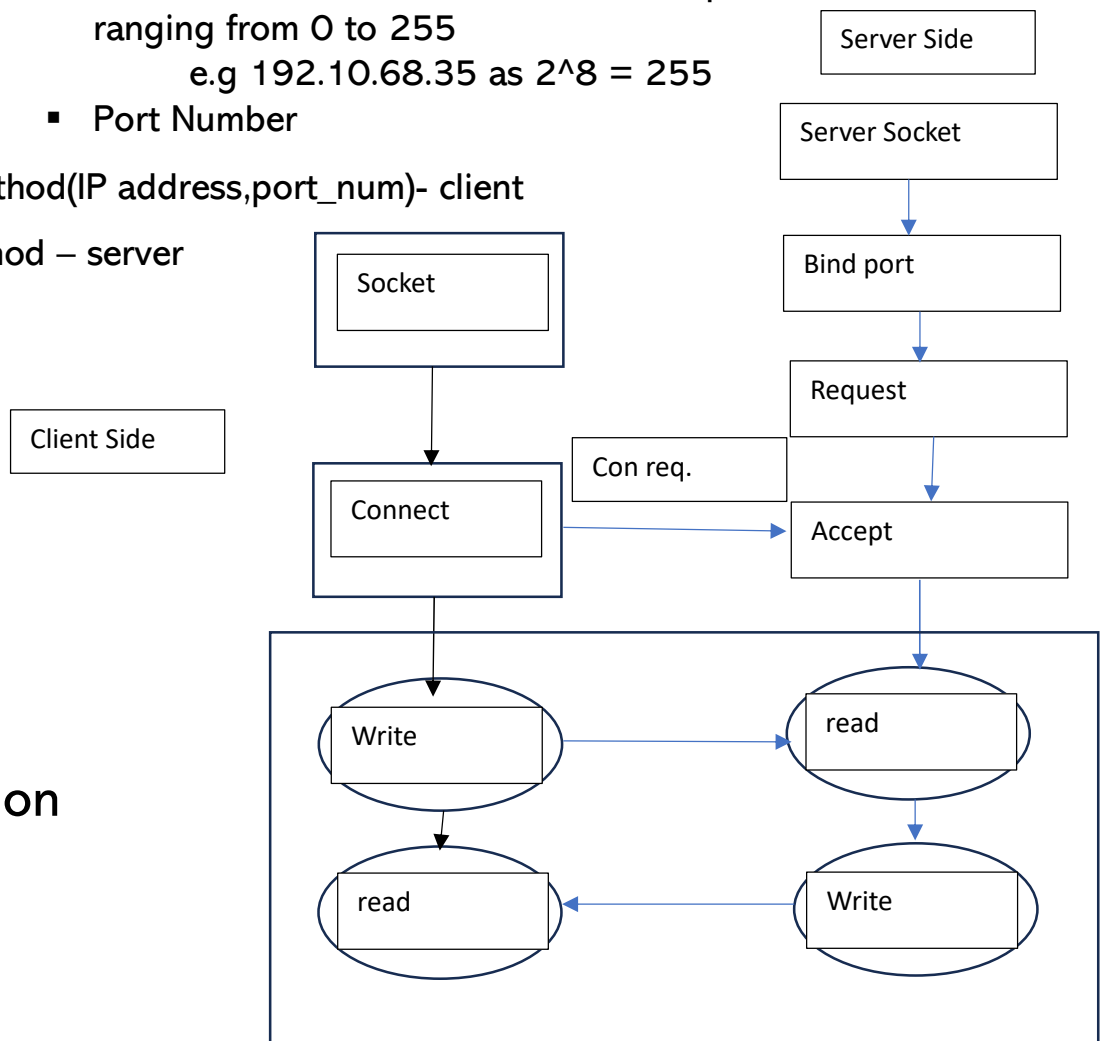

- The IP address of the server : It is composed of octets ranging from 0 to 255
e.g 192.10.68.35 as $2^8 = 255$
- Port Number

Connect method(IP address,port_num)- client

Accept method – server

Connection

Cycle ♻️

`DataOutputStream` -> `IO` package
